Wickersham Again Successful Candidate Alaskan Delegate Election

Delegate Election Spirited Contest

Wickersham receives plurality vote and will succeed himself as Delegate to Congress from Alaska.

Regulars and Socialists Run Close Race

Election is locally a democratic stampede. Harrais cellar champ.

Throughout Alaska the 1912 Delegate election with the candidates each having a possessory, argumentative or district advantage, proved a very spirited affair with some surprises mixed in for good measure, the result being the re-election of James Wickersham to represent the Territory in the 63d Congress. Among the surprises of the election is the close results of the regular republican and socialist campaigns. Gilmore

the republican nominee, who though practically little known in Southeastern Alaska, proved so popular in the far north that he was able to hold his own with the socialist candidate Krauczunas, who received a surprising vote in nearly every district. Martin Harrais, nominee of the baby moose democratic party received the largest collection of goose eggs.

Locally the results show a democratic stampede which is chiefly credited to the fact that Jennings, aside from the socialist candidate was the only one to personally present his case to the voter, and to the efforts of Z. R. Cheney, who appealed to Wrangell voters in a campaign speech August 6th.

Dan Passengers

Passengers to Wrangell on the Dan this week are: Mrs. E. Pitcher and W. H. Bailey, of Fish Egg and M. Snawley, of Kowheen.

The Vote in Nine Alaska Cities

	Wickersham	Gilmore	Krauczunas	Jennings	Harrais
Ketchikan	38	27	43	26	2
Wrangell	19	4	5	45	
Juneau	140	52	21	118	1
Skagway	95	10	7	20	1
Valdez	98	47	21	27	32
Fairbanks	218	100	127	80	37
Nome	124	346	117	97	
Cordova	41	92	15	18	5
Seward	12	96	9	41	

City of Seattle Aground Near Ketchikan

The steamer City of Seattle which sailed from Wrangell at seven last night southbound, grounded near Ketchikan while running in dense fog. No damage is reported and she is expected to float off at high tide today.

New Game Law Regulations

New departmental rules for protection of game which took effect on August 1st.

In a circular of the Biological survey, U. S. Department of Agriculture, which was issued August 2, are six new regulations for the protection of Alaska game, some of which, as they apply locally, appear below.

Open Season for deer.—The season for killing deer in southeastern Alaska shall be limited to the period from August 15 to November 1, both inclusive.

Limits.—The number of deer killed by any one person during the open season shall be limited to 6.

Sale.—The sale of deer carcasses in southeastern Alaska shall be suspended until August 15, 1913.

Killing deer on certain islands.—The killing of deer on the following islands in southeastern Alaska: Duke Island, near Dixon Inlet; Gravina Island, near Ketchikan; Kruzof Island, west of Sitka; Suenes Island, near Klawak; and Zarembo Island, near Wrangell, is hereby prohibited until August 1, 1914.

Manuwal Party Visits Sitka

J. H. Parker and party, of the cruiser Manuwal, made a cruise to the west last week visiting Sitka and Warm Springs Bay returning to Wrangell Sunday afternoon.

\$1,400.00 Nugget

A Southeastern Alaska nugget in the shape of a business opportunity faithfully worked, was picked up by W. H. Bailey and partner who cleaned up \$1,400.00 this season baking for the trollers in the vicinity of Forester Island. While the gold nugget (may?) be rare in this section the business opportunity makes profitable "diggin's" for an enterprising being. Mr. Bailey, as seen in another column, came in on the Uncle Dan from the west, with \$700.00 as his share of profits from a short season, took passage for Seattle last night.

Shakan Foreman Injures Hand

H. Thronson, foreman of the cannery at Shakan, met with a serious accident Saturday while working with a topping machine, which broke the bone and badly damaged the flesh of one finger.

Wrangell - Alaska

THE WRANGELL SENTINEL

HAROLD F. DAWES, Editor and Proprietor.

Published at Wrangell, Alaska, every Thursday Afternoon

Entered as Second Class Matter, at the Wrangell, Alaska, Postoffice, under Act of Congress of March 3, 1879

\$2.50 per year in advance, otherwise \$3.00 Foreign Countries 50c extra

Overlooked

Starting in with a force of five signal corps men and by the transfer process which seemingly works one way, and that away, the local U. S. Army cable and wireless telegraph office force has been allowed to dwindle to but one man at probably the busiest time in two years. The Juneau Dispatch reports that Private Dale, of the Juneau office has been slated for the Wrangell Wireless Station. Let us hope the tide will turn this way soon and bring us at least two

men. Wrangell has been overlooked long enough. The limit has been reached in the elimination marathon.

Making Good

Anyone visiting the plant of the Alaska Sanitary Packing Company cannot but feel that the firm is making good in their intent to employ resident labor. If the majority of Alaska canneries were located in organized towns instead of isolated places preference for resident labor rather than foreign would soon be the rule rather than the exception.

Edibility of Antarctic Animals.
Dr. Lionville of the "Pourquoi-Pas" recently described to a French audience—always interested in gustatory matters—the character of the fresh meat obtainable in polar regions. The birds taste, Le Monde Illustré quotes him as saying, exactly like an unbled duck which has been thoroughly steeped in cod liver oil. The seal evokes somewhat the idea of boiled beef; it is insipid with a marked flavor of fish. The various species of whales are of diverse value. Europeans find it impossible to swallow the jubarte, though the Japanese eat it willingly. The narqual is very good for twenty-four hours; its meat is pale and oily, recalling vent. The fin whale is exquisite, like vent of the first quality; unfortunately it, too, lacks in keeping qualities.

How to Sharpen Old Files.

A method to sharpen old files that has proved quite satisfactory, although it is rather odd, is to clean them of all grease and foreign matter and suspend them from a metal plate by a piece of bare wire in a bath of three parts of sulphuric acid, six parts of nitric acid and 100 parts of water. Several plates of carbon should be immersed in the same bath and connected by bare wires to the metal plate supporting the files. The cavities in the file are eaten deeper, and the edges are made almost as sharp as if worked by a file cutter.

The Mysterious Foehn Wind.

All tourists through the Alpine regions have heard of the foehn wind the many manifestations of which are most mysterious. The snow and ice of the mountains disappear in a few hours under its action, and many persons experience a sickness of a peculiar character while the foehn wind is on. In some parts of the Alps the wood of the houses is dried out so thoroughly that it is like tinder, and at times when this is at all prolonged it is necessary to prohibit the use of fires within the houses. While this precaution is not usually necessary, it is quite common to see a fire patrol making a tour of the town as an extra precaution.

Production of Phosphate Rock.

The production of phosphate rock in the United States continues to increase steadily. According to Frank B. Van Horn of the United States geological survey, the production last year was 3,053,270 tons, valued at \$11,900,000. This is an increase over the production for 1910 of 3,088,291 tons, at an increased value of nearly a million dollars.

Citizen's Opinions

on Home Rule Bill

Some say the Alaska Home Rule Bill means nothing. It gives no power to Alaskans to control the regulation of which they have most reason to complain of, the game, fish and forests. It is admitted that this part Sec. 3, of the bill is, to speak mildly, unfortunate, but is not the bill a step in the right direction? It cannot regulate fishing but it can regulate canneries and make them contribute a little toward the expenses of the territory. It can put a stop to a species of contract labor which practically enslaves the laborer while the time contracts last. It can put bounties on killing of wolves which are so destructive to deer. It can commence a war on fish traps which will destroy the fish in ten years if they are not abolished. These things and many others can be accomplished by the new legislature. It is a great step in the right direction and Alaskans should welcome its coming.

NEW PLATING PROCESS.

Ingenious Invention Deposits Metal on Wood or Glass.

An ingenious invention which is limitless in its applications has been perfected by two Italian chemists, according to Chambers' Journal. Briefly described, it comprises a means of depositing metals of any character upon any insoluble surface by electrical energy. The results so far achieved promise to revolutionize the whole art of electroplating and decoration, as well as many other branches of industry. China, wood, glass, celluloid, paper and other substances which have hitherto been regarded as beyond the electroplater's craft are coated as easily as the metals generally associated with this process. What is more, the plating is everlasting. It enters into the fabric treated so that it becomes an integral part of the article. Thus, for instance, if an attempt is made to chip the plating from a glass vase the glass will come away with its metal coating.

There is a Wedgwood tea service on exhibition which shines with the true luster of polished silver. The outer surface is so well covered with this metallic armor that the whole resembles a silver set. It is only when the interior is examined and the pottery beneath is observed that one realizes that the silver had been deposited upon the external surface. What is more, the outer sheathing is not a thin film, but a solid sheet of metal, which can be made of any thickness and capable of being worked by the engraver. The authorities have expressed their willingness to apply the hall mark to articles so mounted. The process is likely to supersede the present process of silver mounting cut glass and other articles. Instead of the metallic adornment being attached by means of plaster of paris, which is simply a makeshift, the metal deposited upon the glass becomes part and parcel of the article.

The process has extended the electroplater's art to a considerable degree. Any metal and its alloys can be electrically deposited upon some other metal as a base. Zinc, tin and lead can be deposited as easily as silver or nickel. This fact is of vital interest to a host of industries, as is borne out by the action of one of the largest builders of naval vessels, who has adopted the process for the zinc and tin plating or galvanizing of the steel parts of the boats. The deposit is not so thin, as in ordinary galvanizing, that a pin scratch will penetrate the protective skin, but is a solid sheathing of metal associated with the other metal beneath.

The possibility of being able to plate wooden articles seems so remote as to be fantastic, yet it is as efficiently accomplished by the Marino process as if copper were being plated. So far as china plating is concerned, the article must be in the unglazed or biscuit condition and is first coated with a chemical agent. In the same manner glass which is to be treated must first be roughened by sand blasting to remove the polish and to enable the metal to secure a grip. Another point is that the deposit, no matter what the character of the base, may subsequently be oxidized, lacquered, etc., in just the same way as ordinary electro work.

USES OF ZIRCON.

Rare Earth Mineral Extensively Employed in Various Industries.

The United States geological survey has just published a short report on zirconiferous sandstone near Ashland, Va., by Thomas L. Watson and Frank L. Hess. The sandstone containing zircon, a rare earth mineral, was found on a number of farms, and laboratory tests made in the survey show that the percentage of zircon in it is considerable.

"Should the demand for zircon and further testing of the Ashland deposits warrant exploitation," the report states, "operations could be carried on with comparative ease. The rock can be crushed easily, the zircon and associated heavy minerals could be separated from the quartz by shaking tables, and the ilmenite could be picked out by a magnetic separator."

The uses of zircon in its different forms are numerous. It is employed in the manufacture of electric lamps. It is a good insulator for both electricity and heating; it makes an excellent refractory crucible, as well as linings for electric furnaces; it is well adapted for making beads and aqueducts, as it is unaffected by gas, acids or alkalis. In one form it is a valuable abrasive and is capable of cutting thick glass as readily as a diamond. Clear zircons of brownish or bluish or reddish color are cut for gems and are then known as *hyacinths*.

Powerful Cloth Cutter.

An electrical machine has been installed in a Brooklyn factory for cutting coats for umbrellas which cut through 350 thicknesses of cloth at once, making enough shapes to cover fifty umbrellas.

Wrangell, Alaska

Red in Battle.

Red has always been a favorite military color. Its employment dates from the time of Lycurgus, the Spartan, who commanded his army to be arrayed in red tunics in order that new recruits might not be dismayed at the sight of blood. Its first use in the British army dates from 1526, when the yeomen of the guard were dressed in red.

Milton's Works.

Milton regarded the "Paradise Regained" as infinitely superior to the "Paradise Lost" and once expressed great surprise that any one should entertain a contrary opinion. He said that of all his works the poem "On the Morning of Christ's Nativity" was his best. It was his earliest, being written in 1629, when he was twenty-one years of age.

Sticking Gaskets.

Where asbestos and some other materials are utilized for gaskets they are apt to stick to the metal and upon overhauling must be scraped off. This means making new members and loss of time and a source of expense to the owner. A tight fit may be made by rubbing the packing and metal parts with dry graphite. This is not affected by heat and will allow the gaskets to be removed as a whole.

NOVEL CANAL TOWBOAT.

Electrically Driven and Operated on a Submerged Rail.

A novel method of towing canal barges, in which the towboat, which can be exceptionally small, operates on a submerged rail, has been recently tried out on the Dortmund-Ems canal, Germany, says Popular Mechanics. Because of the economy and simplicity of the system and for the reason that it minimizes the disturbance of the bottom and sides of the canal, thus eliminating dredging to a great extent, it is said that it may take the place of all other systems in Germany.

The single rail on which the towboat runs is loosely anchored at the bottom of the canal in such a manner that it can be easily lifted even higher than the surface of the water when repairs are to be made without disturbing any of its joints or anchorage, while at the same time any excessive displacement in a horizontal direction is prevented by the particular method of anchorage in use. Four trolley wheels mounted under the towboat

TOWBOAT LIFTED OUT OF WATER, SHOWING POSITION OF TROLLEYS.

and driven by electric power grip the head of the rail between them, normally lifting it from one foot six inches to three feet twenty-five inches above the bottom of the canal. No lifted, the weight of the rail gives friction or tractive force to the trolley wheels, thus just reversing the means of traction of the ordinary railroad in that the tractive power is provided by the weight of the suspended rail instead of by the weight running over it.

In the experiments so far made it has been found that 15 per cent of the electrical energy consumed is transformed into motive power and that a saving of 50 per cent in cost of towage is effected. The power is taken from an overhead wire. The towboat can be very small, as its size has nothing to do with its towing capacity, and therefore it can be lifted out of the water under any bridge crossing the canal for the purpose of readjustments or repairs.

"AMERICA'S FINEST FLOURING MILLS"

WHY? Blend Flour

STRAIGHT Eastern Hard Wheat flour has its uses, as has straight Soft Wheat flour. But to get results from the hard wheat flour, it must be thoroughly blended. The housewife finds this too obvious. Furthermore, we're living in a labor-saving age. Yet Eastern Hard Wheat flour has desirable qualities that cannot be overlooked in the production of the best breadstuffs. Hence, realize this, for invariably they combine flour themselves, made of Eastern Hard Wheat and Western Soft Wheat—that is to say, BLEND THEM. But the two must not be mixed haphazardly, as the superiority of combination depends wholly on a proper balance. Before offering the public their product, the Fisher Flouring Mills Company made exhaustive tests to determine the exact proportions of each flour required to produce the blend of highest efficiency. The formula finally adopted, in actual baking competition with all other well-known brands on the market today, has repeatedly demonstrated its excellence. You get this scientific combination in buying
